

```
-- T-SQL Script for Creating Additional Database Users in Azure SQL Database
--
-- Created for the online course on Udemy: "Introduction to Azure® SQL Database for Beginners"
--
-- Course URL: https://www.udemy.com/course/introduction-to-azure-sql-database/
--
-- Author/Instructor: Artemakis Artemiou
--
-- Disclaimer: This SQL script which is part of the online course on Udemy "Introduction to Azure®
-- SQL Database for Beginners", is intended to be used only for demo purposes. Do not
-- use it for Production systems as it is simplified for demo purposes.
--
```

```
-- create SQL login in master database
-- make sure you have switched context to the master database
CREATE LOGIN testLogin1
WITH PASSWORD = 'StrongPasswordGoesHere';

-- add database user for login testLogin1
-- make sure you have switched context to the user database
CREATE USER [testLogin1]
FROM LOGIN [testLogin1]
WITH DEFAULT_SCHEMA=dbo;

-- add user to database role(s) (i.e. db_owner)
ALTER ROLE db_owner ADD MEMBER [testLogin1];
```
